

LIQUID PVC

Technical data sheet N° MISIT0402.a – Cancels and replaces Rev.1

COMPOSITION

Polyvinylchloride in tetrahydrofuran (THF).

PROPERTIES

High sealing power for PVC membranes, flammable liquid.

Easy to use with the suitable applicator.

PRODUCTION STANDARD

- Can of 1 kg
- Colour: sky blue, light blue, caribbean green, aqua, sand, antacitre black, dark grey, pearl grey, white, transparent, wild musk and marmorino rosa
- The shelf life is almost 6 month, if the container is seal hermetically and maintained at room temperature.

SETTING METHOD

The product is used for the cold sealing of the welding done on Flagon PVC membranes.

For the welding method see the instructions set out from the PVC membrane producer in the sections “welding instruction and method”.

The consumption is around 10 gr of each meter of welding.

HANDLING

- Avoid contact with polystyrene
- Do not apply on wet waterproofing membrane
- Respect the instructions and dispositions stated on the label and in the MSDS of the product.

CHARACTERISTICS		LIQUID PVC
Colour		different colours
Physical aspect		viscous liquid
Density at 20°C	(g/cm ³)	0,98
Ignition temperature	(°C)	-21 (DIN 51755)
